ABSTRACTED-PUB-NO: CA 805618A

BASIC-ABSTRACT:

The addition to a cereal-containing foodstuff suitable for preparing baked products or a cereal flour of 0.1 to 1.0 wt.% of L-lysine.H₃PO₄, cereal or flour basis, and a baked cereal-containing foodstuff normally deficient in lysine fortified by this means.

The foodstuff, e.g. bread dough, is fortified with lysine without causing an undesirable decrease in baked dough volume or an objectionably dark browning on baking. The products are not objectionably bitter. The lysine salt is relatively non-hygroscopic and is easy to handle.

L-lysine.H₃PO₄ is prepared from substantially equimolar proportions of L-lysine and H₃PO₄ in an aqueous reaction medium. The product is precipitated by addition of a water-miscible organic liquid.

TITLE-TERMS: CEREAL PRODUCT CONTAIN LYSINE ORTHO PHOSPHORIC ACID
